

CENTURY DESIGN INC.

CE COMPLIANT

CD-6250 Automated Outfeed/Drying Module

FROM CONCEPT TO COMPLETION

Highlights

- Combines with CD-6220H to remove all moisture from cleaned parts, and transfer them into a standard poly storage bin or through a partition into a separate work area. Intended to follow the M-4500 Blank Cleaner in an automated or semi-automated process line.
- Simple design, built from components common to all of Century Design's automated infeed, transfer and outfeed modules
- Can be powered by the production machine it services, or by a separate power source
- Sound deadening materials used throughout to reduce noise of the CD-6220's air knife down to acceptable levels
- Two part ejector options:
 - Side-Feed design, feeds parts out the side of the machine and into a standard poly storage bin.
 - End-Feed design, intended to feed through a partition from a "dirty" finishing area into a "clean" paint area
- Part length-side feed 60 inches (1,525 mm), end feed infinite, Part diameter-1 inch (25.4 mm), Feed rate: 1 ft/sec (300 mm/sec)
